

At FDC Composites, we believe that it is the duty of the companies to demonstrate environmental and social responsibility, and we are committed to implementing specific measures to integrate sustainable development values into all our Activities. We also use the responsibility of our employees to integrate environmental management and sustainable development concerns into their tasks and functions. We recognize the importance of involving our stakeholders in the management of our environmental footprint and, as a result, we value the transparency and continuous improvement of our practices.

1. Integrating sustainable development VALUES into our activities

Fostering research and development activities that stimulate innovation in sustainability;

Efficiently use the resources we provide

Reduce waste of materials by automating some of our processes

Optimize the management of residual materials that we generate;

Encourage the sustainable mobility of our employees.

2. HEALTH and SAFETY at work

Improve our practices to reduce our risk of workplace accidents

To promote the good health and quality of life of employees at work.

3. Involving our KEY STAKEHOLDERS

Seek the support of our main customers and suppliers in achieving our objectives;

Train and involve our employees in the steps we undertake.
